Healthmark Industries Introduces the Adjustable Stringer

Fraser, MI March 9, 2012- Healthmark Industries announces the introduction of the the new *Adjustable Stringer*.

Stringers used in the preparation of instruments for sterilization are usually 2” - 3” in width. Stringers for use in decontam are typically 5” - 6” in width to maximize the openness of the instruments to the spray action of the washer. This has created the need for double inventory of stringers - until now. This new tool adjusts to all sizes of instruments for more effective cleaning of hard to reach areas containing bioburden, and can also be adjusted to the optimal width for placement of instruments inside a tray for terminal sterilization. Stringers adjust from 2.5” – 5” in width. Available in 3 lengths: 8”, 13” and 17”.
